Introduction + Data Exploration

Machine Learning for Behavioral Data

February 17, 2026

EPFL

IC

Today

- Course Logistics
- Data Exploration - Lecture
- Introduction to projects
  - EdTech StartUp(s) presentation
  - Project guidelines
- Data Exploration - Lab

About Me

- Assistant professor at EPFL since May, 2020
- Head of the ML4ED lab
- In the past, I was a
  - senior data scientist at the SDSC
  - postdoc at Stanford University
  - postdoc at ETH Zurich/consultant for Disney research Zurich
  - PhD student at ETH Zurich

Team

Instructor

Tanja Käser
tanja.kaeser@epfl.ch

Teaching Assistants

Seyed Parsa Neshaei, Marta Knežević, Jiaxu Zhao
seyed.neshaei@epfl.ch, marta.knezevic@epfl.ch, Jiaxu.zhao@epfl.ch

Students – Shake Hands

This will be an interactive course…

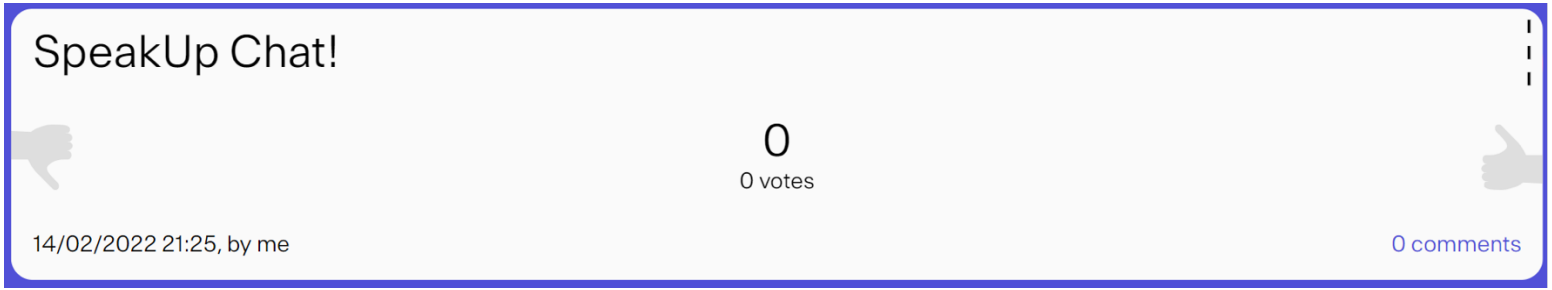
What is ML for Behavioral Data?



What is ML for Behavioral Data?

Week	Lecture & Lab (13:15-16:00)	Project Hours (16:15-17:00)	Milestones
1	Introduction + Data Exploration	Project Presentation + Environment Setup	-
2	Regression	Introduction to tasks for M2	*M1: Preferences on team members and data sets (Feb 25, 23:59)*
3	Classification + Model Evaluation	Office hours – Individual Drop-In	
4	Time Series Prediction	Office hours – Individual Drop-In	
5	Time Series Prediction	Introduction to tasks for M3/M4	*M2: **Individual** exploration of selected data set (March 19, 23:59)*
6	Time Series Prediction	Office hours – Individual Drop-In	*M3: selection of research question and approach (March 26, 23:59)*
7	Unsupervised Learning	Individual discussion with teams	
8	Spring Break		
9	Unsupervised Learning	Office hours – Individual Drop-In	
10	Ethical Machine Learning	Team Coaching	
11	Ethical Machine Learning	Office hours – Individual Drop-In	*M4: submission of results for first research question (April 30, 23:59)* *M5: ideas for extension and approach (April 30, 23:59)*
12	Reserve	Individual discussion with teams	
13	No lecture	Office hours – Individual Drop-In	
14	No lecture	Office hours – Individual Drop-In	
15	Poster Session		*M6: Poster Session, May 26 (13.15-17.00, EPFL Campus)*
16	Semester End	Semester End	*M7: Hand in report and code base (June 4, 23:59)*

Lecture/Lab

- Monday, 13:15 – 16:00
- INJ 218
- Lecture + practice session
- Slides will be uploaded to our GitHub
- Jupyter Notebooks will be uploaded to our GitHub
- Recording: we will make past recordings available (videos from **2022**)

Project

- Teams of 3 people
- Choice of two different data sets (from EdTech Start-Ups)
- There will be several milestones during the semester
- You will do a poster presentation in the last week of the semester on May 26 (13:15 – 16:00), attendance is mandatory
- Final project (Code + Report) delivered by June 4, 2026 23:59 CET

➢ Detailed information on project and milestones today in the lab session

Project (Office) Hours

- Tuesday, 16:15-17:00
- INJ 218
- Content:
  - Introduction to project tasks
  - Individual feedback meetings with teams
  - Drop-in office hours for questions regarding the lecture or project

Grading

- **50% Project**
  - Teams of 3 people
  - All milestones are mandatory
  - Attendance of all individual feedback meetings, team coaching meetings, and the **final poster session** is **mandatory**
  - 15% individual exploration (M2), 25% intermediate results (M4), 20% poster presentation (M6), 40% final results (M7)
- **50% Final Exam** (exam session)
  - Individually
  - Conceptual questions

Important Websites

- Moodle: https://moodle.epfl.ch/course/view.php?id=16434
  - Contains all important information
  - Use EdStem forum for questions
  - For more personal questions contact teaching assistants
- Project:
  - GitHub: https://github.com/epfl-ml4ed/mlbd-2026
  - EPFL Noto: https://noto.epfl.ch/

Questions?

Today's Topic

Week	Lecture/Lab
1	**Data Exploration**
2	Regression
3	Classification + Model Evaluation
4	Time Series Prediction
5	Time Series Prediction
6	Time Series Prediction
7	Unsupervised Learning
8	Spring Break

Today: Data Exploration

- **Univariate Analysis**
- Multivariate Analysis
- Time Series

Today's Use Case: Flipped Classroom Course

- Participants: 157 EPFL students of a course taught in *flipped classroom* mode with a duration of 10 weeks
- Structure:
  - Preparation: watch videos (and solve simple quizzes) on **new content** at home as a preparation for the lecture
  - Lecture: discuss open questions and solve more complex tasks
  - Lab session: solve paper-and-pen assignments
- Data: clickstream data (all interactions of the student with the system)

Today's Use Case: The Data

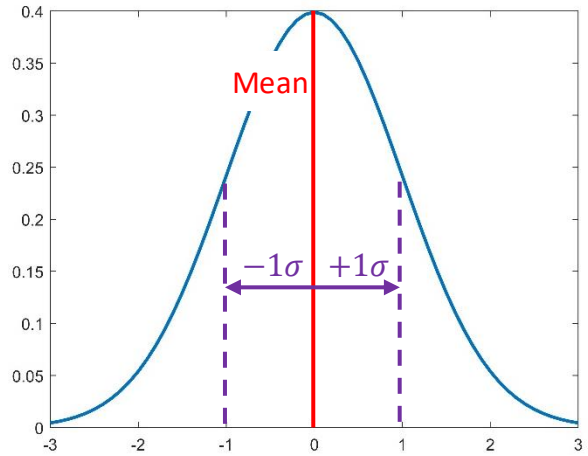
Center of the data

Spread of the data

Example: Normal Distribution

- Sample mean: $\mu_{\bar{x}} = \frac{1}{n}\sum_{i=1}^{n} x_i$
- Sample variance: ${\sigma_{\bar{x}}}^2 = \frac{1}{n}\sum_{i=1}^{n} (x_i - \mu_{\bar{x}})^2$
- Mode: most frequent value in data set
- Median: separates the lower and upper half of the data (1, 2, 2, **3**, 4, 7, 9)



Example: Normal Distribution

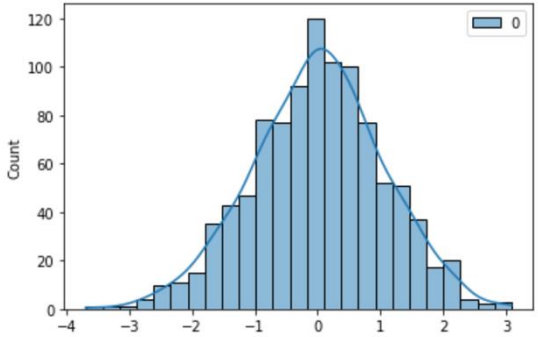
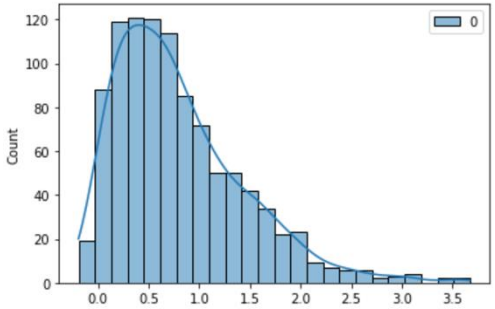
- Center of the data?
- Spread of the data?
- Shape/distribution of the data?

Does my data follow a normal distribution?



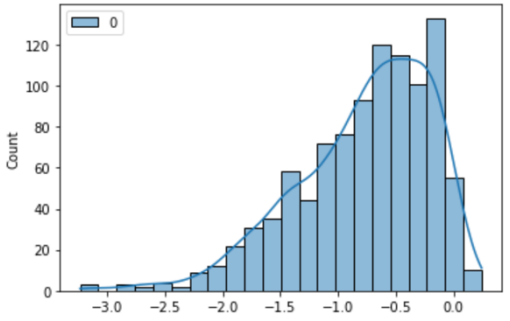
symmetric

Normal test p = 0.39



right skewed

Normal test p = 8.7e-43



left skewed

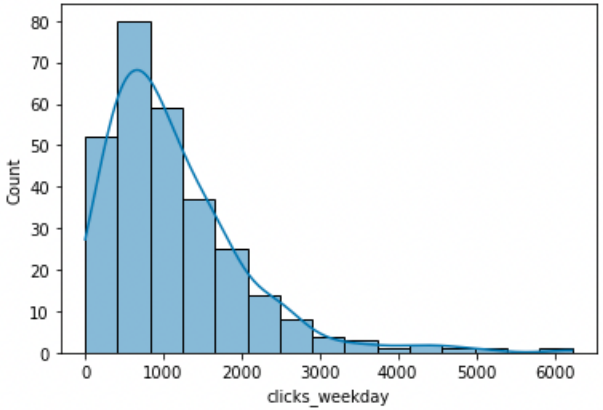
Normal test p = 6.0e-26

Important Distributions

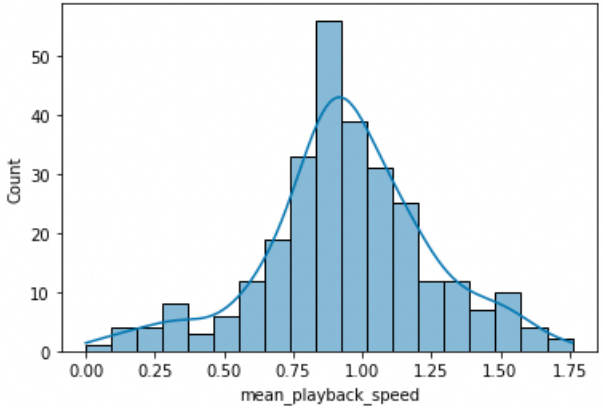
- **Normal distribution :** *(continuous)* see previous slides
- **Poisson distribution:** *(discrete)* expresses the probability of a given number of events occurring in a fixed interval of time or space
- **Exponential distribution** *(continuous)* distribution of times between events in a Poisson process
- **Binomial distribution**: *(discrete)* models the number of successes in a sequence of independent experiments
- **Bernoulli distribution**: *(discrete)* special case of binomial distribution (n=1)

Visual Inspection

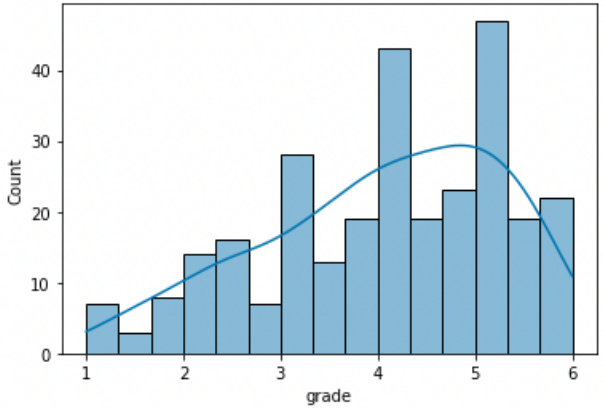
p = 6.20579e-29
The null hypothesis can be rejected



p = 0.0216998
The null hypothesis cannot be rejected



p = 5.78191e-05
The null hypothesis can be rejected

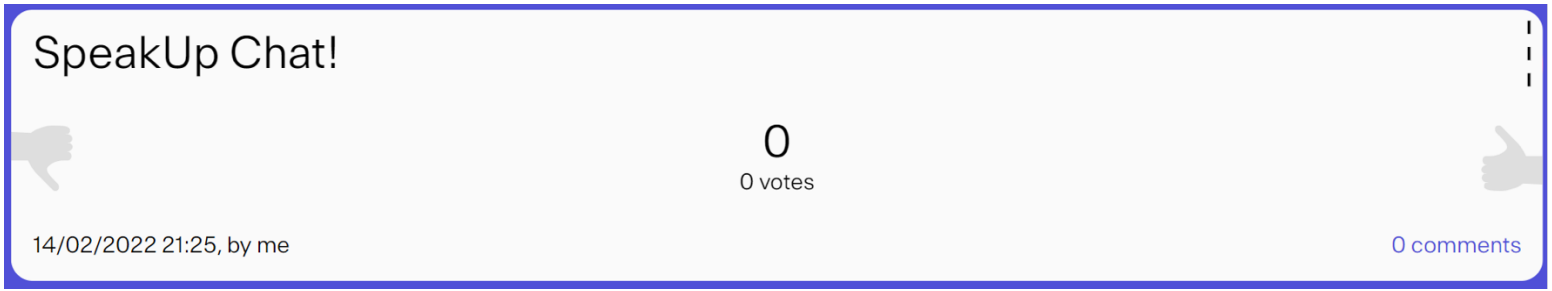


Data Exploration

- Univariate Analysis
- **Multivariate Analysis**
- Time Series

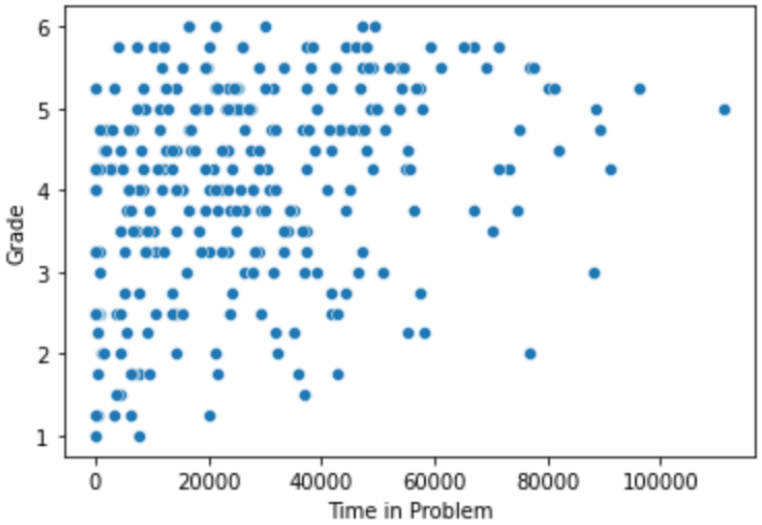
Multivariate Analysis

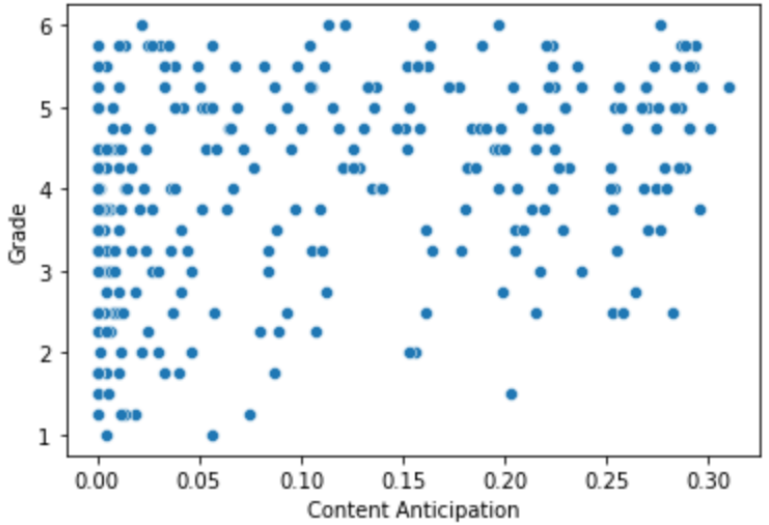
How can we explore the relationship between two variables?



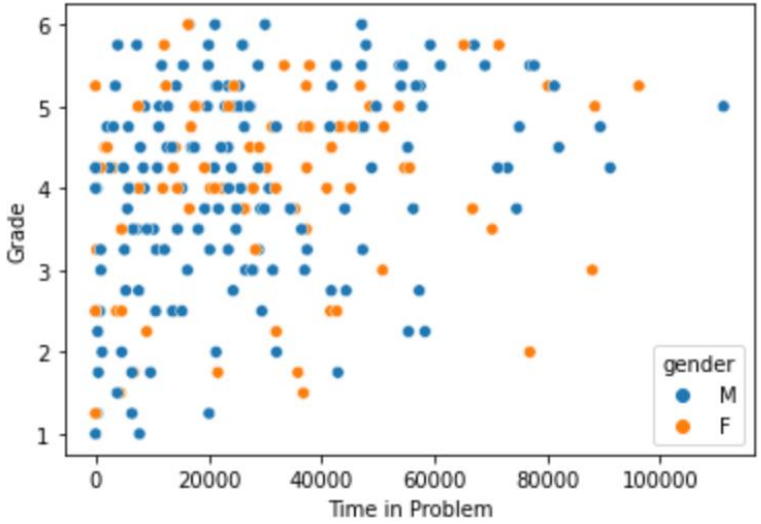
https://go.epfl.ch/mlbd-speakup

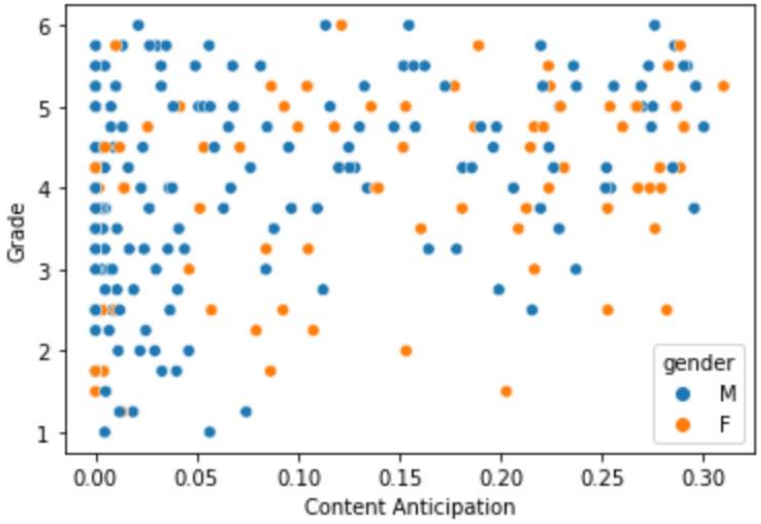
Relation between numerical variables



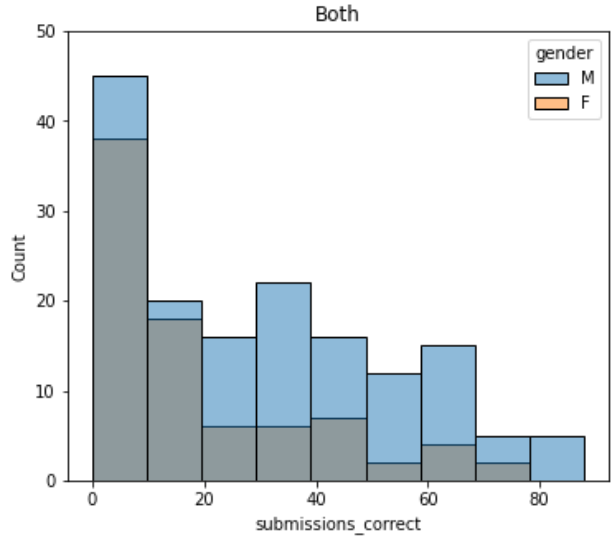


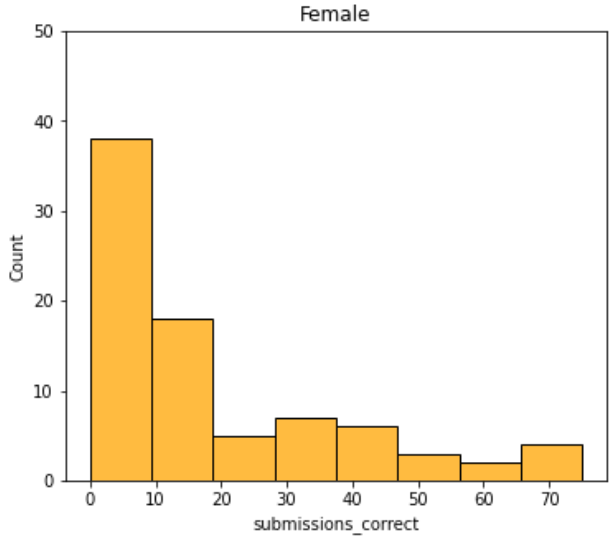
Relation between numerical & categorical variables

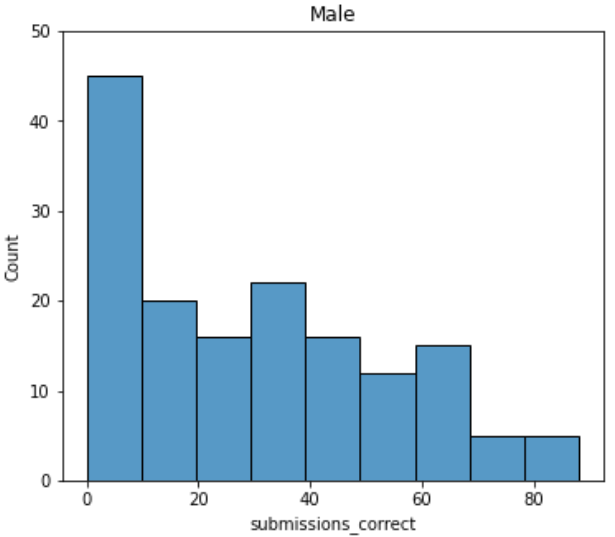




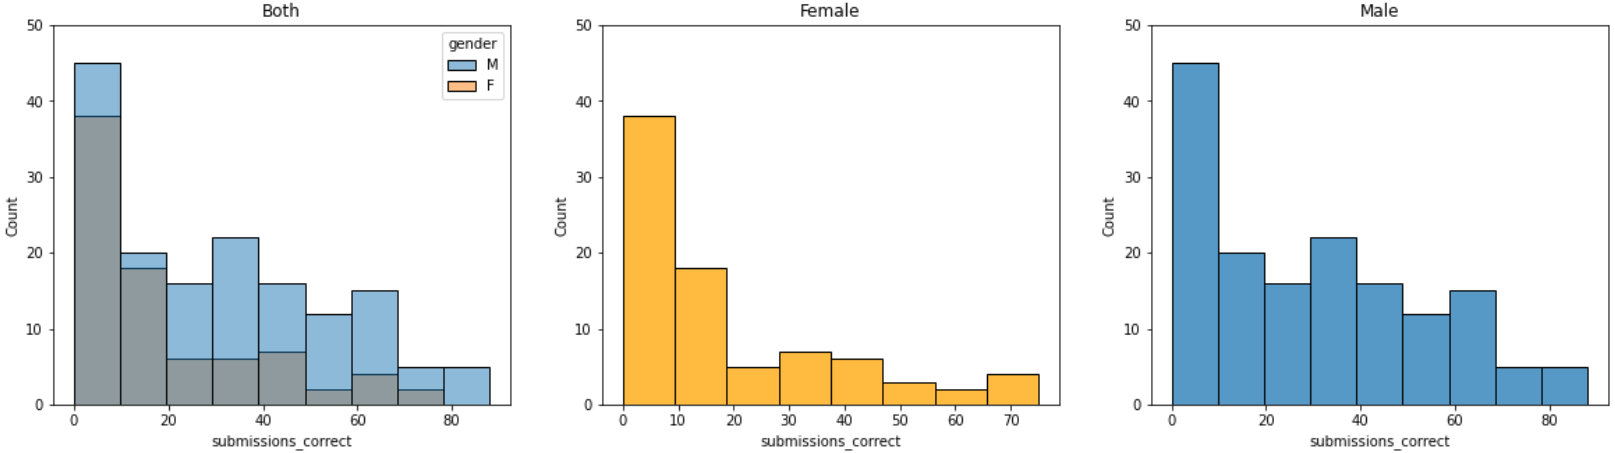
Submissions Correct by Gender







Who is more likely to have correct submissions?



a) Students identifying as male are more likely to have a correct submission.
b) Students identifying as female are more likely to have a correct submission.
c) I cannot answer based on the visualization.

https://go.epfl.ch/mlbd-speakup

Pearson's Correlation

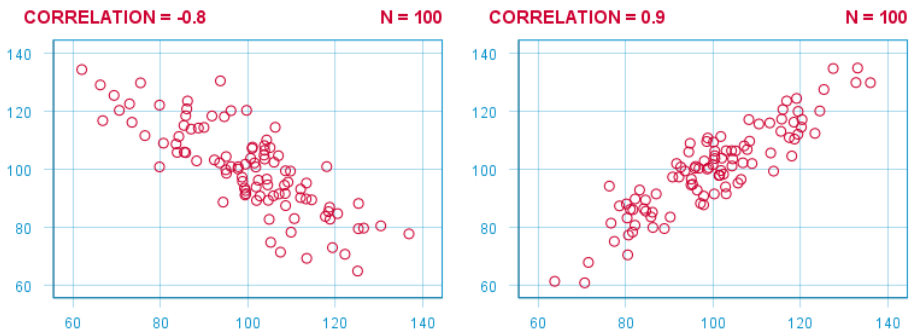
Linear correlation between two sets of data.

$$\rho_{X,Y} = \frac{cov(X,Y)}{\sigma_X \sigma_Y}$$

Where $cov(X,Y)$ is the covariance

σ_X is the standard deviation on X

σ_Y is the standard deviation on Y



Pearson's Correlation

Linear correlation between two sets of data.

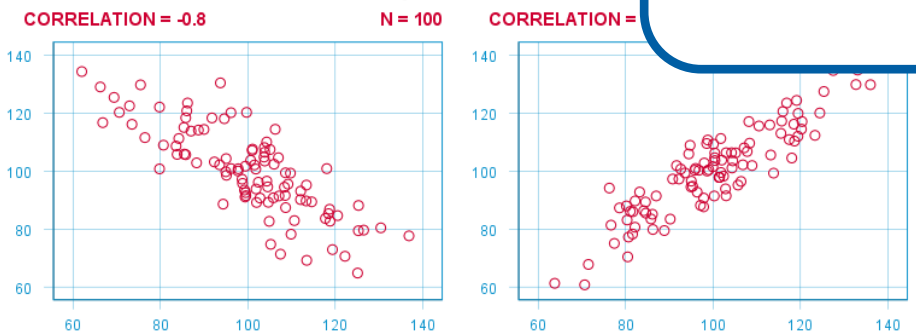
$$\rho_{X,Y} = \frac{cov(X,Y)}{\sigma_X \sigma_Y}$$

Where cov

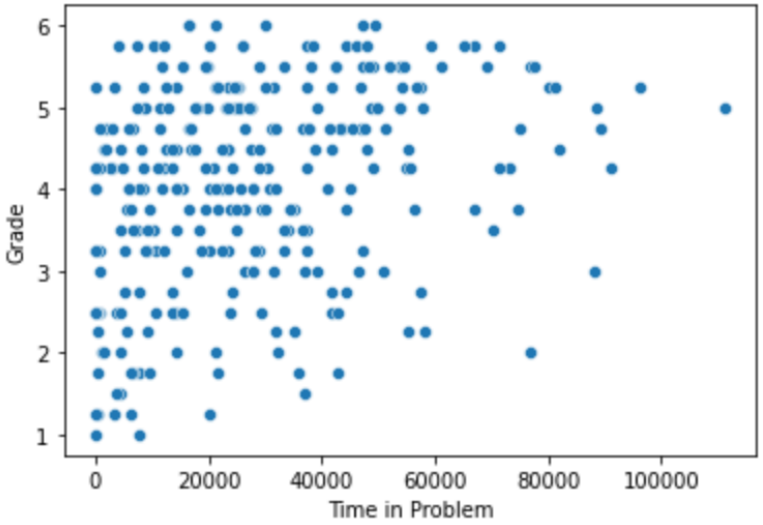
σ_X is the st

σ_Y is the st

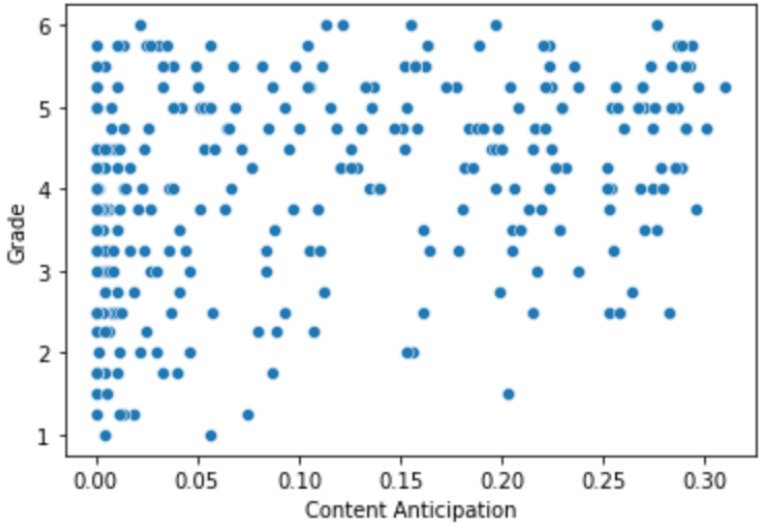
X and Y need to be numerical or at least ordinal variables



Correlation between variables



$\rho = 0.31\ (p = 6.8e - 8)$



$\rho = 0.32\ (p = 1.5e - 08)$

Pearson's Correlation

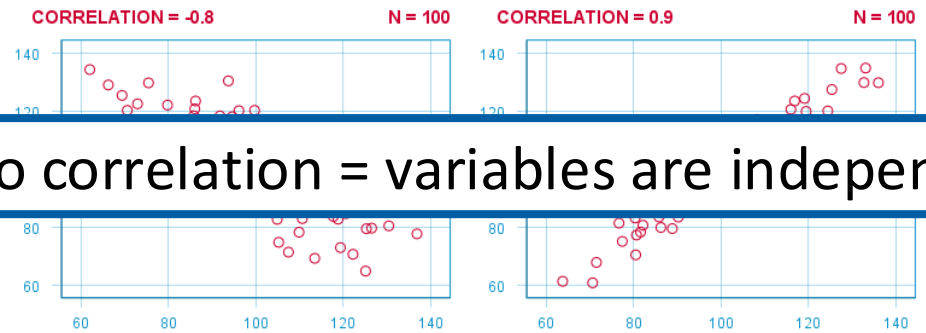
Linear correlation between two sets of data.

$$\rho_{X,Y} = \frac{cov(X,Y)}{\sigma_X \sigma_Y}$$

Where $cov(X,Y)$ is the covariance

σ_X is the standard deviation on X

σ_Y is the standard deviation on Y



No correlation = variables are independent?

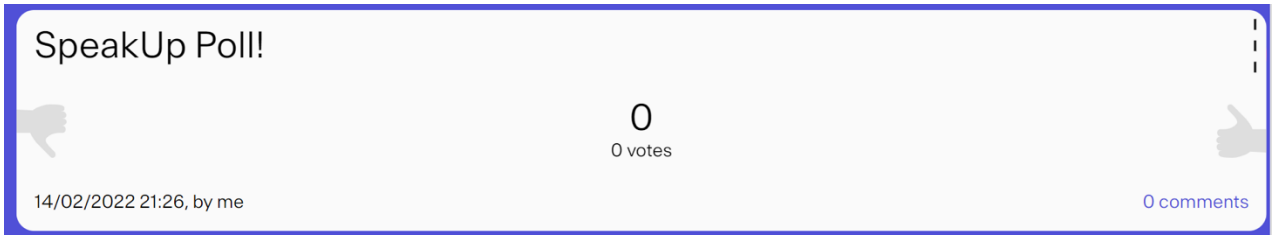
Pearson's Correlation

Linear correlation between two sets of data.

No correlation = variables are independent?

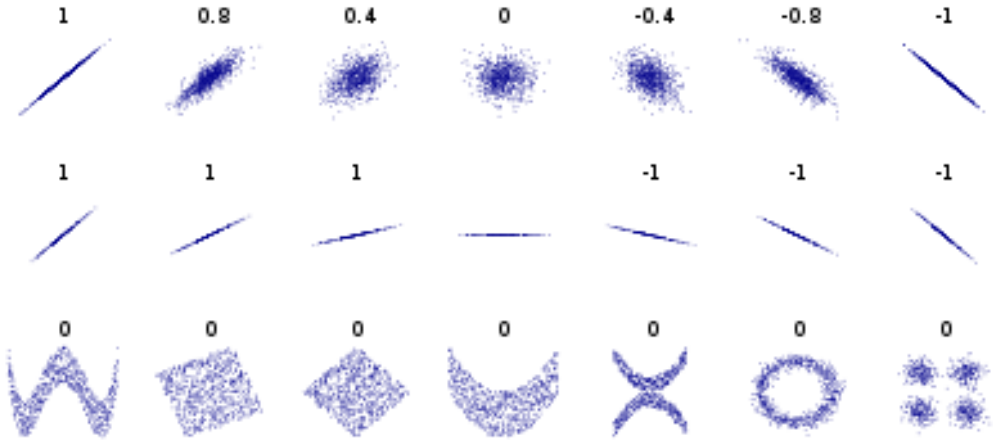
a) Yes

b) No



https://go.epfl.ch/mlbd-speakup

Pearson's Correlation



$$X, Y \text{ independent} \rightarrow \rho_{X,Y} = 0$$

$$\rho_{X,Y} = 0 \not\rightarrow X, Y \text{ independent}$$

Image Source: https://en.wikipedia.org/wiki/Pearson_correlation_coefficient

Mutual Information

- Dependence between two random variables: “Amount of information” obtained about one random variable through observing the other random variable

$$I(X;Y) = D_{KL}(P_{(X,Y)} || P_X \otimes P_Y)$$

where X and Y are random variables, $P_{(X,Y)}$ is their joint distribution, P_X and P_Y are the marginal distributions, and D_{KL} is the Kullback-Leibler divergence.

Mutual Information

- Dependence between two random variables: “Amount of information” obtained about one random variable through observing the other random variable

$$I(X;Y) = D_{KL}(P_{(X,Y)} || P_X \otimes P_Y)$$

where X and Y are random variables, $P_{(X,Y)}$ is their joint distribution, P_X and P_Y are the marginal distributions, and D_{KL} is the Kullback-Leibler divergence.

- For discrete distributions

$$I(X;Y) = \sum_{x \in X} \sum_{y \in Y} p(x,y) \cdot \log\left(\frac{p(x,y)}{p(x) \cdot p(y)}\right)$$

Mutual Information - Motivation

- For discrete distributions

$$I(X;Y) = \sum_{x \in X} \sum_{y \in Y} p(x,y) \cdot \log\left(\frac{p(x,y)}{p(x) \cdot p(y)}\right)$$

- If X and Y are *independent,* then $p(x,y) = p(x) \cdot p(y)$ and therefore:

$$\log\left(\frac{p(x,y)}{p(x) \cdot p(y)}\right) = \log(1) = 0$$

Pearson Correlation vs Mutual Information

Pearson's Correlation Coefficient

Mutual Information

Data Exploration

- Univariate Analysis
- Multivariate Analysis
- **Time Series**

Time Series Data

Records, which are measured sequentially over time:

- **Business**: sales figures, production numbers, customer frequencies, ...
- **Economics**: stock prices, exchange rates, interest rates, ...
- **Official Statistics**: census data, personal expenditures, road casualties, ...
- **Natural Sciences**: population sizes, sunspot activity, chemical process data, ...
- **Environmetrics**: precipitation, temperature or pollution recordings, ...

Time Series – Behavioral Data

Records of user behavior, which are measured sequentially over time:

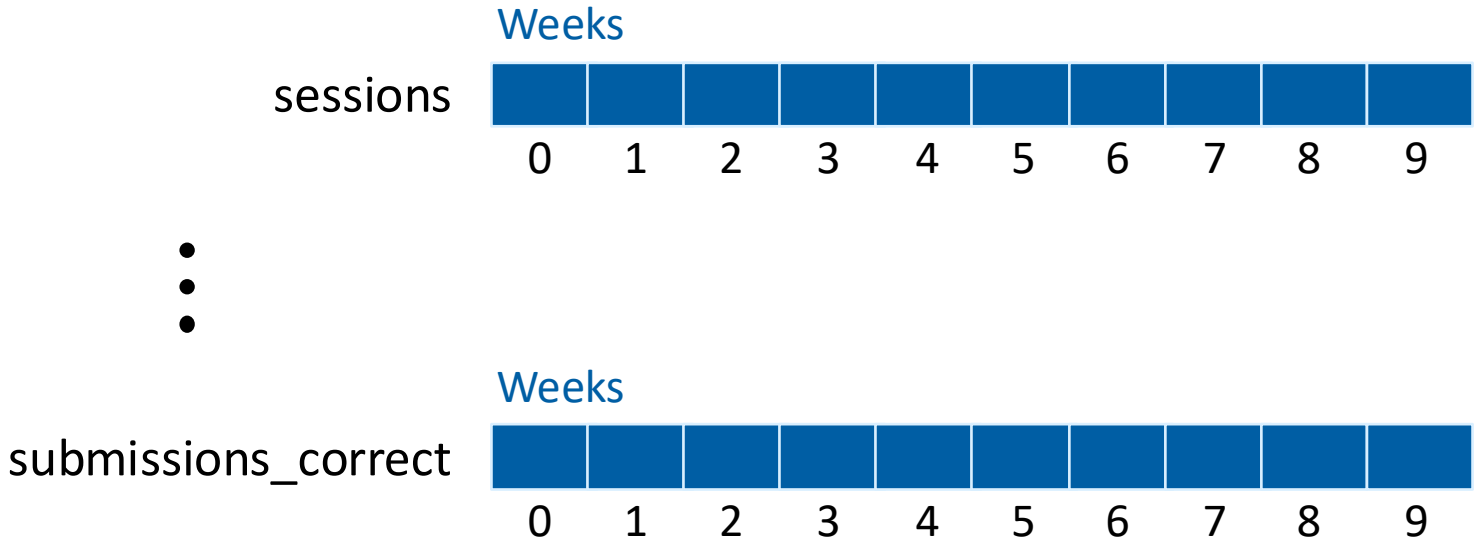
- we usually deal with multiple time series (i.e. one time series per user u)
- a record $r_{u,t}$ of a user u at time t can consists of multiple variables

We might be interested in representing, analyzing, and predicting behavior of single users or of group of users:

- Visualization and exploration of time series data (this lecture)
- Modeling time series data (later…)

Time Series – Our flipped classroom case

Student n

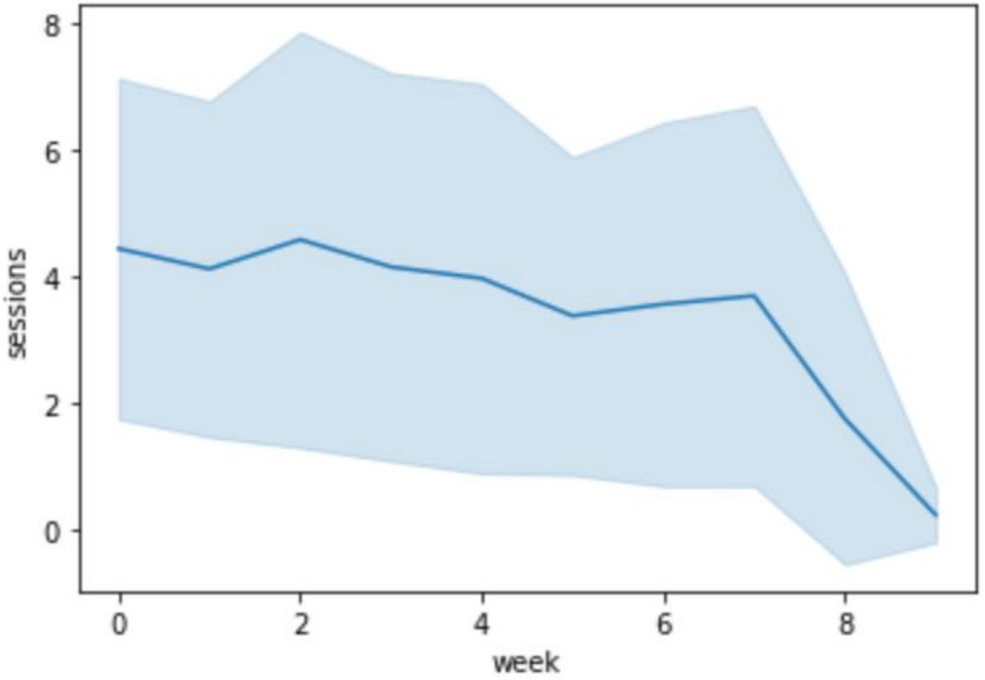


Hypothesis 1

The number of sessions will decrease over the course of the semester.

Hypothesis 1

The number of sessions will decrease over the course of the semester.

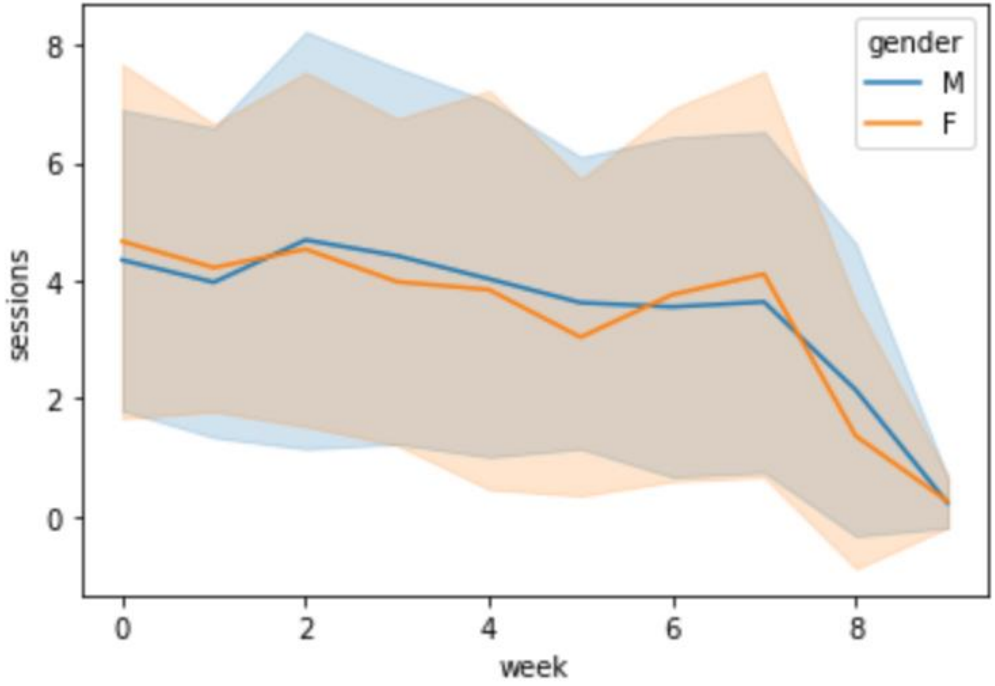


Hypothesis 2

There is no difference between males and females in terms of the number of sessions.

Hypothesis 2

There is no difference between males and females in terms of the number of sessions.



Your turn!

- Come up with a hypothesis on your own
- Produce a visualization
- Describe: what do you observe? Can your hypothesis be confirmed?

Noto: Student notebook

- Go to https://noto.epfl.ch/
- Login with your GASPAR
- Go to Git → Clone
- Clone the course repository: https://github.com/epfl-ml4ed/mlbd-2026
- Download the data from: https://bit.ly/mlbd-data-lec1

Summary

- Compute descriptive statistics
- Visualize, visualize, visualize,…
  → Different types of visualizations or representations help to identify different types of problems
  → Different types of visualizations help to identify different patterns/properties in the data
- Try to gain as much knowledge as possible about the domain and the data collection

Up next…

- Introduction to projects:
  - Presentation of start-ups and datasets
  - Project guidelines
- Exercises on data exploration
